Nursing Research has a long and distinguished record in the history of nursing science. Since its launch in 1952, Nursing Research has been a "cooperative venture" of scientists, professional organizations, publisher, editorial staff, and readers to circulate scientific papers in nursing to improve care, alleviate suffering, and advance well-being.

The Bristol stool scale is a diagnostic medical tool designed to classify the form of human faeces into seven categories. It is used in both clinical and experimental fields. It is sometimes also referred to as the Bristol stool chart (BSC), Bristol stool form scale, or BSF scale.. It was developed at the Bristol Royal Infirmary as a clinical assessment tool in 1997, and is widely used as a ...

Wandering, in people with dementia, is a common behavior that can cause great risk for the person, and is often the major priority (and concern) for caregivers. It is estimated to be the most common form of disruption from people with dementia within institutions. Although it occurs in several types of dementia, wandering is especially common in people with Alzheimer's disease (AD).

WHAT IS TELEPHONE TRIAGE? Telephone triage is a complex process by which trained clinicians identify a patient's problem, estimate the level of urgency, and render advice to the patient over the phone (Huibers et al., 2011). Telephone triage, however, does not involve making diagnoses—nursing or medical—by phone (Lephrohon & Patel, 1995; Perrin & Goodman, 1978).
